Globalization, the shape of cities, the future of cities, the increasing gap between rich and poor inhabitants, and ethnic and racial segregation, are the key themes of this book. Taking examples from cities from Sao Paulo to Istanbul, from New York to Edinburgh, and adding their own ideas, the authors examine what might be done to improve things for all those who live in cities.

Many of the oldest and largest Western cities today are undergoing massive economic decline. The State and the City deals with a key issue in the political economy of cities—the role of the state. Ted Robert Gurr and Desmond S. King argue that theoreticians from both the left and the right have underestimated the

significance of state action for cities. Grounding theory in empirical evidence, they argue that policies of the local and national state have a major impact on urban well-being. Gurr and King's analysis assumes modern states have their own interests, institutional momentum, and the capacity to act with relative autonomy. Their historically based analysis begins with an account of the evolution of the Western state's interest in the viability of cities since the industrial revolution. Their argument extends to the local level, examining the nature of the local state and its autonomy from national political and economic forces. Using cross-national evidence, Gurr and King examine specific problems of urban policy in the United States and Britain. In the United States, for example, they show how the dramatic increases in federal assistance to cities in the 1930s and the 1960s were made in response to urban crises, which simultaneously threatened national interests and offered opportunities for federal expansion of power. As a result, national and local states now play significant material and regulatory roles that can have as much impact on cities as all private economic activities. A comparative analysis of thirteen American cities reflects the range and impact of the state's activities at the urban level. Boston, they argue, has become the archetypical postindustrial public city: half of its population and personal income are directly dependent on government spending. While Gurr and King are careful to delineate the limits to the extent and effectiveness of state intervention, they conclude that these limits are much broader than formerly thought. Ultimately, their evidence suggests that the continued decline of most of the old industrial cities is the result of public decisions to allow their economic fate to be determined in the private sector.

Does the concept of ethnicity divide the oppressed or unite minorities? Is the term 'community' a dangerous fiction? What are the relations between the liberal capitalist democratic state and racialized minority groups? The contributors to this

book confront and discuss these questions, bringing together ideas on urban social theory, contemporary cultural change and analysis of racial subordination in order to explore the relationship between racism, the city and the state. The book concentrates on the urban context of the process of racialization, demonstrating that the city provides the institutional framework for racial segregation, a key process whereby racialization has been reproduced and sustained. Individual chapters explore the profound divisions inscribed on the face of the city, showing for example that ethnicity is more powerful than social class in moulding the identities of new migrants to California, and that the reconstruction of French capitalism has opened new opportunities for the growth of right-wing popularism. The contributors show how, in the UK, urban space over the last two decades has been redefined and reconstructed in ways which sustain separation and racial inequality, and they highlight how black minorities struggling for survival in Britain's cities are seen as responsible for violence, crime, poverty and overcrowding.

Provides a survey of modern debates on Greek and Roman cities, and a sketch of the cities' chief characteristics.

This title provides an examination of the rise, evolution and decline of the city-state, from ancient times to the present day.

World Cities and Nation States takes a global perspective to show how national governments and states/provinces/regions continue to play a decisive, and often positive, partnership role with world cities. The 16 chapter book is comprised of two introductory chapters, 12 central chapters that draw on case studies, and two summary chapters - draws on over 40 interviews with national ministers, city government officials, business leaders and expert academics.

"More than half the world's population lives in cities; by 2050, it will be more than 75%. Cities are often the economic, cultural, and political drivers of states, and of globalization more generally. Yet, constitutionally-speaking, there has been little to no consideration of cities (and especially megacities, with populations exceeding those of many of the world's countries) as discrete or distinct constitutional or federal entities, with political identities and economic needs that often differ from rural regions or so-called "hinterlands." This book intends to taxonomize the constitutional relationship between states and (mega)cities and theorize a way forward for considering the role of the city in future. In six chapters and a conclusion, the book considers the reason for this "constitutional blind spot," the relationship between cities and hinterlands (the center/periphery divide), constitutional mechanisms for dealing with regional differences, a comparative constitutional analysis of urban-center autonomy, and recent and future innovations in city governance"--

In Hometown Revelations, you will find many mysteries revealed! Some hometowns appear to have normal names but others have very unique stories. Most of the major cities and numerous smaller ones are included in this book where you discover how the town acquired its name. In addition, find out how your

state obtained its name. Not everyone's hometown may be included but the clues and mysteries revealed about other communities may lead you to your own revelation. Did you know? There are a lot of people that call their hometown New York City. But there are also people who live in Defiance, Bliss, Hell, and Paradise! Some of our hometowns sound like dangerous places to live like Savage, Hazard, Tombstone, and Burnt Corn. There are hometowns that appear to be in the wrong locations. Why is Kansas City in Missouri and Paris in Tennessee? Are there Buffalo in New York? A few of us from Georgia live in Between. The names given to cities, towns, and states come from a number of sources. The origins of these names have evolved like the United States. Some of the names come from homesick settlers who wanted to remember their birthplaces. Other names originated from famous heroes and places that were known around the world. During the early history of the United States, some towns were named after new found freedoms. In the 1800's, many towns used Greek and Roman places or heroes. Native Indians were a major source of names. The early French, Spanish, and British explorers were also a major influence. Still, many other creative ways were found by our ancestors to describe their new homes. Emotional feelings or significant events were often used to name their new hometowns. Some names originated from coincidence, errors, or by sheer accident. There were even places named by the flip of a coin. Whatever the reason, we are all Americans and live in the greatest hometowns in the world!
